Advances in fMRI Real-Time Neurofeedback

Takeo Watanabe, Yuka Sasaki, Kazuhisa Shibata, and Mitsuo Kawato*

*Correspondence: kawato@atr.jp (M. Kawato).DOI of original article: <https://doi.org/10.1016/j.tics.2017.09.010>

(Trends in Cognitive Sciences 21, 997–1010, 2017)

Due to an editorial error, Table 1 included effect sizes that were not reported in the original empirical publications. The inclusion of these effect sizes was originally requested by the editorial offices. Because articles in *Trends in Cognitive Sciences* should not discuss unpublished data or analyses, we have removed the reported effect sizes from the article online. Information on how the effect sizes were calculated has been made available by the authors and can be found at <http://www.cns.atr.jp/decnefpro/>.

In addition, the published manuscript did not include information regarding a conflict of interest that was disclosed by the authors upon the initial submission of the manuscript. Specifically, the authors are inventors of patents owned by the Advanced Telecommunications Research (ATR) Institute International that are related to the present work: PCT/JP2014/061543 (WO2014178322), PCT/JP2014/061544 (WO2014178323), JP2015-228970. This has also been clarified in the article online.
