^{*}Deceased.

FIG. 2. The minimum-bias values of v_2 , v_4 , and v_6 with respect to the second harmonic event plane as a function of p_t for $|\eta| < 1.2$. The v_2 values have been divided by a factor of 2 to fit on scale. Also shown are the three particle cumulant values (triangles) for v_4 ($v_4\{3\}$). The dashed curves are $1.2v_2^2$ and $1.2v_2^3$.

In this erratum, we correct the reported results of azimuthal anisotropy v_2 with respect to the second harmonic event plane EP_2 as a function of transverse momentum p_t for charged particles in Au + Au collisions at $\sqrt{s_{NN}} = 200$ GeV.

In Fig. 2 of this Letter, v_2 was erroneously plotted with a factor 2 larger statistical error than they should be over the entire p_t range. Figure 2 in this erratum shows $v_2/2$ as a function of p_t with the correct statistical errors. The data points for $v_4\{3\}$, $v_4\{EP_2\}$, and $v_6\{EP_2\}$ are not affected by this mistake. The message of the figure is unchanged. The physics discussions and conclusions of the Letter remain the same.

We wish to thank Jean-Yves Ollitrault and Peter Kolb for extensive discussions. We thank the RHIC Operations Group and RCF at BNL, and the NERSC Center at LBNL for their support. This work was supported in part by the HENP Divisions of the Office of Science of the U.S. DOE; the U.S. NSF; the BMBF of Germany; IN2P3, RA, RPL, and EMN of France; EPSRC of the United Kingdom; FAPESP of Brazil; the Russian Ministry of Science and Technology; the Ministry of Education and the NNSFC of China; SFOM of the Czech Republic, Hungarian National Research, Development and Innovation Office, New National Excellency Programme of the Hungarian Ministry of Human Capacities, DAE, DST, and CSIR of the Government of India; the Swiss NSF, Ministry of Education, Culture, Sports, Science, and Technology (MEXT) and Japan Society for the Promotion of Science (JSPS).
