University of Chicago

Melissa Korf

Director, Grants & Contracts

Harvard University

As data management and sharing policies have expanded in the federal and private funding spheres, the costs to support institutions and researchers in meeting these expenses for services and infrastructure are not fully understood. A number of higher education organizations are conducting research and developing tactics for cost assessments of infrastructure and services distributed within institutions. This panel will present a snapshot of work recently started at the Federal Demonstration Partnership (FDP), the Council of Government Relations (COGR), and the Association of Research Libraries (ARL) to investigate where public access to research data costs are incurred at an institution, with the goal of assisting universities in defining a strategy for planning for those costs.
