# Planning Linked-Course Communities to Increase Student Success

Tom Kling & Laura Ramsey

NSF IUSE 2020765

# GOAL: CREATE A MORE COMMUNAL CULTURE OF STEM

Social relevance: first-year seminars based on UN Sustainable Development Goals

Peer connections: cohort learning model where first-semester students have multiple classes with the same peers

# MICROCOSM LINKED COURSES

## FIRST-YEAR SEMINAR

Taught by STEM faculty

Capped at 20 students

Encouraged team-based, inquiry-based learning

## MATH COURSE

Based on Math Placement Test

Ranged from pre-college (MATH 095) to Calculus (MATH 161)

## FIRST MAJOR COURSE

(if STEM ready)

Could include a lab or small group section, if required

## PUBLIC SPEAKING

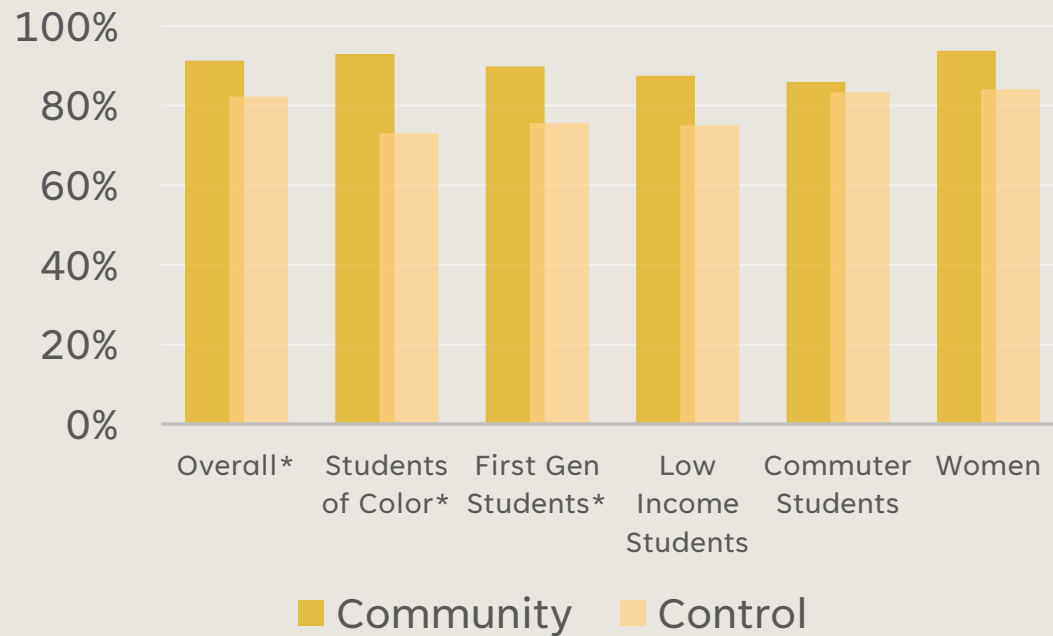

(if not STEM ready)

Fulfills a core requirement

# A RANDOMIZED CONTROLLED TRIAL

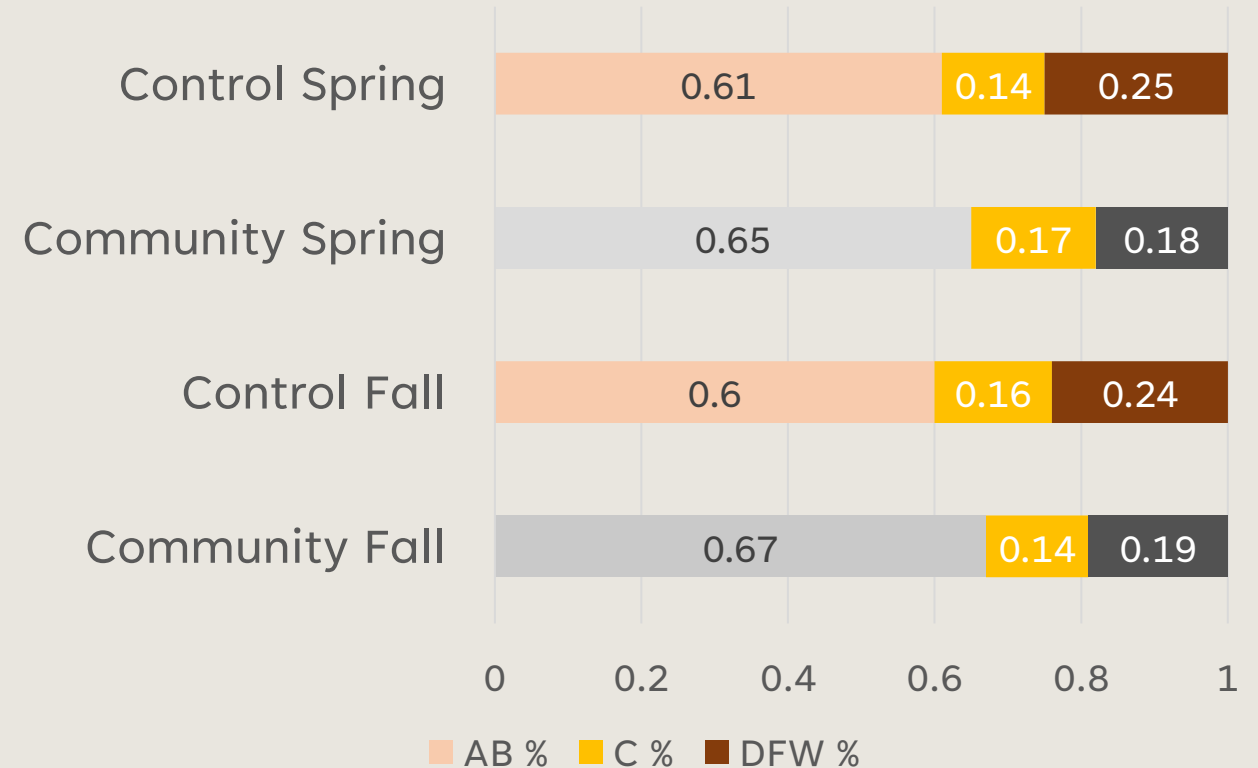

Randomly assigned incoming STEM majors to microCOSM linked courses ( $n=127$ ) or a comparable set of unlinked courses ( $n=164$ )

## Spring STEM Retention

\*Statistically significant at  $p < 0.05$

## Overall Grade Rates

# BENEFITS OF COHORT LEARNING

## INCREASED STUDENT CONNECTIONS & STUDENT SUCCESS

At least it seems that way from our data so far

## STUDENTS TAKE THE COURSES THEY NEED

Students in our study took more required courses than those not in our study

Especially helpful for recommended (but not required) co-requisites

## EASIER ADVISING

Recommending blocks of courses instead of individual courses

## LESS UNPREDICTABILITY FOR FACULTY

Courses may fill more evenly in a linked-course model

# WHAT YOU WOULD NEED TO DO TO SET UP LINKED COURSES

Identify courses that could/should be linked

Schedule those courses so they don't overlap & can easily be taken by the same students

Tell the registrar about the linked courses

Advise appropriate students to register for linked courses

## What is your goal?

- Create quicker connections among new majors
- Create connections among smaller groups within a larger major
- Ensure students take certain courses at a particular time
- Something else?

How can you best enroll the students? What is the local process of advising incoming 1st year students?

# DISCUSSION

Could linked courses work for your department or college?

- What benefits would you anticipate?
- What challenges?
